§ 1.136(a), and any fees required therefor (including fees for net addition of claims) are hereby authorized to be charged to our Deposit Account No. 19-0036.

## **Amendments**

In the Claims:

Please cancel claim 4 without prejudice or disclaimer.

## Please substitute the following claim 1 for the pending claim 1:

- 1. (Once amended) A method for killing neoplastic cells, said method comprising:
- (a) delivering into said neoplastic cells a vector for gene delivery, said vector comprising a nucleotide molecule encoding folylpolyglutamyl synthetase (FPGS), wherein said nucleotide molecule directs the production of said FPGS in said neoplastic cells containing said nucleotide molecule:
- (b) treating said neoplastic cells containing said nucleotide molecule with an antifolate drug; and
  - (c) killing said neoplastic cells containing said nucleotide molecule.

Please substitute the following claim 2 for the pending claim 2:

2. (Once amended) The method of claim 1, wherein said FPGS is a mammalian FPGS.

()

Please substitute the following claim 3 for the pending claim 3:

3. (Once amended) The method of claim 2, wherein said mammalian FPGS is a human FPGS.

Please substitute the following claim 5 for the pending claim 5:

5. (Once amended) The method of claim 1, wherein said antifolate drug is methotrexate, edatrexate, aminopterin, at a thymidylate synthetase inhibitor.

## Please substitute the following claim 11 for the pending claim 11:

11. (Once amended) The method of claim 1, wherein said vector for gene delivery is a prokaryotic vector, a cationic liposome, a fusogenic liposome, a DNA-adenovirus conjugate, a DNA-protein complex, a non-viral T7 autogene vector, a starburst polyamidoamine dendrimer, a cationic peptide, a mammalian artificial chromosome, an endothelial cell, or a macrophage.

## Please add the following claims:

12. (New) The method of claim N wherein said vector for gene delivery is a prokaryotic vector.

13. (New) The method of claim 1, wherein the vector for gene delivery is delivered into said neoplastic cells by direct injection of nucleic acid, particle-mediated gene transfer, or receptor-mediated gene transfer.
